

IS YOUR WATER RUST-FREE YET?

Sicher, sauber, schnell

www.dr-rohr.ch

WHY IS THERE RUST IN THE PIPES?

Rust occurs when oxygen in the water causes the iron plumbing to oxidise over time.

THE PROBLEM WITH RUST

Brown water, drops in pressure, burst pipes: and that's just the start. Usually, when water pipes are replaced, the whole house becomes a construction site. There's no water for weeks and there's lots of noise, mess and stress. And that's not to mention the high costs for plumbers, bricklayers, painters, pavers, plasterers, floorers, etc.

SYMPTOMS

Be honest: Do you really want to take a bath in water that comes out of the taps brown? In most parts of Europe, the quality of drinking water is above average. But before you can enjoy it, it has to flow through many pipes. These are rarely clean and shiny – mostly calcified and rusty. That's how limescale and rust quickly end up in your drinking water.

RUST AND MY HEALTH

Rust and limescale aren't health hazards. The main problems with the water are low pressure, discolouration and an unpleasant taste.

THE SOLUTION FROM DR. ROHR

By using the RISAN® restoration process, you can save a lot of time, money and stress. That's because the installed pipes are not replaced (which would be very costly), but are instead restored sustainably from the inside. As a result, the existing system can be used to its full potential. This is the cost-effective alternative to the time-consuming and expensive process of installing a new system.

SIMPLE – SAFE – SPOTLESS – SPEEDY.

**RESTORATION
NO CONSTRUCTION SITE
NEEDED
ONLY WITH
DR. ROHR**

Maximum safety and a full guarantee!

WITH US AT DR. ROHR

THE METHOD USED BY DR. ROHR

Pipe restorations are, above all, a statement about the environment. Our methods are extremely resource-friendly. We don't create any new waste mountains or use any valuable raw materials such as stainless steel or plastic.

THE METHOD USED BY DR. ROHR

Dr Rohr RISAN® AG specialises in the non-destructive restoration of drinking water pipes in systems that use pipes of up to 2" diameter. The restoration process uses the very latest technology. Over decades, we have developed methods for cleaning the inside of pipes. These have kept pace with technological progress and meet all legal guidelines.

**SAFE
CLEAN
SPEEDY
RELIABLE**

Maximum cleanliness and quality

SAVE ON COSTS WITH DR. ROHR

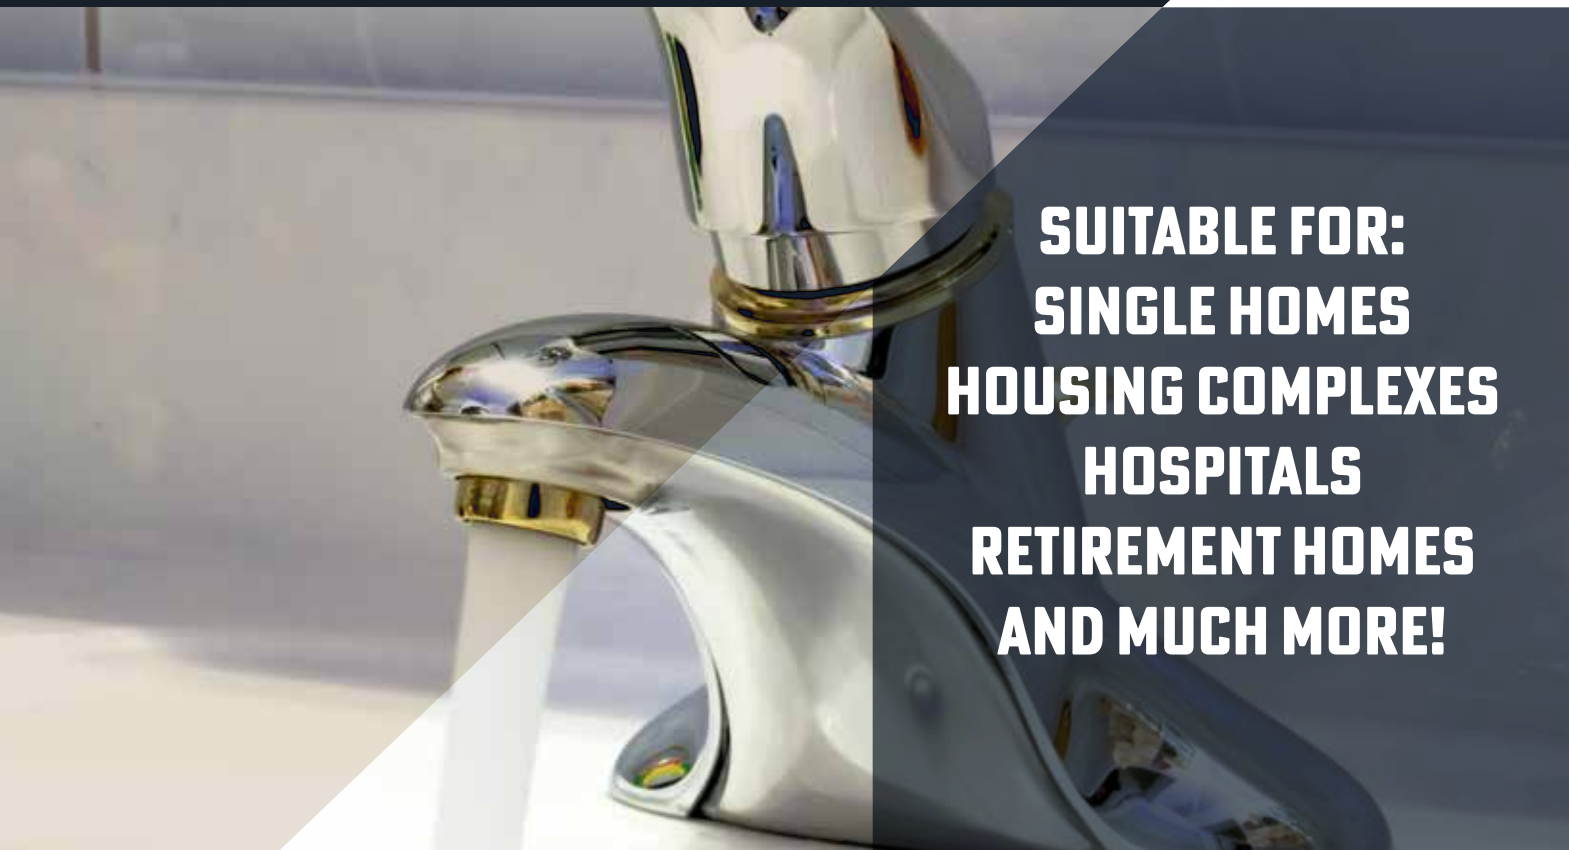

Up to 50% cheaper than
conventional restoration.

10 times quicker than a full
replacement.

CLEANING THE PIPES FROM THE INSIDE

Is your system made of galvanised steel tubing or copper? Is it more than 30 years old?

If so, it's time to put it through its paces. At Dr. Rohr, we are specialists in the field and will gladly carry out a comprehensive examination.

**SUITABLE FOR:
SINGLE HOMES
HOUSING COMPLEXES
HOSPITALS
RETIREMENT HOMES
AND MUCH MORE!**

Maximum safety and a full guarantee!
